DataTracks

FERC XBRL MADE EASY

Prepare pre-validated compliance reports for FERC, with DataTracks Glacier!

Convert financial data from source systems like Microsoft Excel into XBRL and prepare reports ready for submission to the FERC. It is an easy-to-use, nimble and intuitive application, hosted on a secure cloud that helps you prepare compliance reports in just a few minutes.

Delight for Excel Experts

Pre-tagged blank Excel templates (in the format advised by FERC) are downloadable for creating the XBRL file.
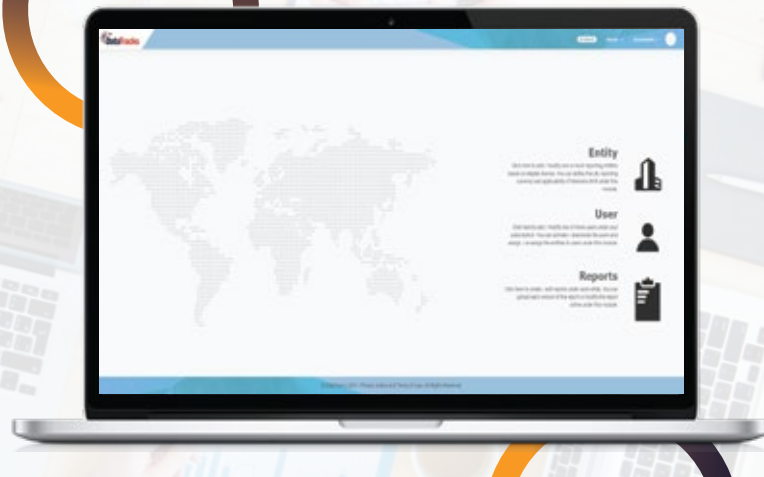

Comprehensive validation

TThe data can be validated as per FERC's compliance norms and users can prepare 100% error-free XBRL reports. Our validation engine has about 5000+ business and XBRL rules which are exhaustive in the back-end but has a light UI.

Version Compare

Users can easily identify the difference in values compared between the reports of two different periods and also within the same reporting period.

Key Benefits

Easy to use

Glacier is engineered for finance professionals and they need not familiarize or learn about the technicalities of XBRL. Users can prepare FERC compliance reports from Excel to XBRL in a few steps.

Cloud-based Application

Glacier is hosted on a highly secured AWS server. Users can simply log in and use the application from any device with good internet connectivity.

Automation

Existing source systems can be easily integrated into Glacier by a simple file-to-file formula linking or a macro that automatically transmits your data to Glacier's Excel.

Roll Forward

Transfer historical data from previously submitted documents into DataTracks Glacier. Once populated, the process of using this data to submit your filings is easy and seamless.
